                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                          ઠે
                                                  This invention relates to novel antibodies that immunospecifically bind to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to C chromosome 1344 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single chain antibody molecules (GCFWs) derived, preferably, from the variable composition refers to the use of such antibodies in various methods for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As such, these compositions are useful for identifying immune disorders including myasthenia gravis and multiple sclerosis, inflammatory disorders e.g. asthma and rheumatorid arthritis, infectious diseases such as AIDS and proliferative disorders including leukaemia, carcinoma and lymphome and confident and the disorders including leukaemia, carcinoma and cymphome. Accordingly, they can be described as exhibiting various cativities such as antirheumatic, antiallergic and cytostatic. This cativities such as antirheumatic, antiallergic and cytostatic. This collypeptide sequence is a single chain antibody that binds BLyS of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format contine the printed specification, but was obtained in electronic format contined the printed specification, but was obtained in electronic format.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antibody that specifically binds neurokinin B, useful for preparing a

The invention relates to a novel antibody specifically binding neurokinin B. An antibody of the invention has hypotensive, and gynaecological activity, and may have a use in gene therapp. The antibody is useful for preparing a composition for treating or preventing hypotension or preclampsia. The present sequence is used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Elymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAlDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABF47228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention describes novel antibodies that immunospecifically bind

The invention relates to an isolated antibody or its fragments such as WHCDR1 (heavy chain variable domain complementarity determining region), WHCDR2, WHCDR3, WLCDR3 (light chain variable domain complementarity determining region), VLCDR2 or VLCDR3. The antibody or its fragment immunospecifically binds TRAIL (tumour necrosis factor; TNF-related apoptosis-inducing ligand) receptor 7 (TR7). TR7 is also referred to as TRAIL receptor 2 (TRAIL-R2), death receptor 5 (DR5) and KILLER. The antibody or its fragment is useful for treating, preventing or antibody or its fragment is useful for treating, preventing or gastrointestinal cancer or Kaposi's sarcoma or cancer of the central nervous system such as medulloblastoma, neuroblastoma or glioblastoma or grate, versus host disease, AIDS (acquired immune deficiency syndrome) or a neurodegenerative disease. AIDS (acquired immune deficiency syndrome) or therappy. The present sequence is human scrv protein that specifically

This invention relates to novel antibodies that immunospecifically bind to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to chromosome 1344 and encodes a protein that is a member of the tumour chromosome 1344 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single chain antibody molecules (scFvs) derived, preferably, from the variable cheavy CDR3 region that immunospecifically bind to a polypeptide, or fragment thereof, of either human, murine, rat or monkey BLyS. The present invention refers to the use of such antibodies in various methods for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As such, these compositions are useful for identifying immune disorders cauch, these compositions are useful for identifying immune disorders can including myasthenia gravis and multiple sclerosis, infectious diseases such as ALDS and proliferative disorders including leukaemia, carcinoma and climphoma. Accordingly, they can be described as exhibiting various activities such as antirhemental arthritic, neuroprotective, mission matically and proliferative disorders including antiple such as antirhemental arthritic, neuroprotective, mission mission matically and antiplication of an antiplication and coordingly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel antibody that immunospecifically binds to a B lymphocyte stimulator (BLys), useful for detecting and treating diseases or disorders e.g. rheumatoid arthritis, asthma and leukemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antiinflammatory, antiasthmatic, antiallergic and cytostatic. This polypeptide sequence is a single chain antibody that binds BLyS of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                       Single chain antibody that immunospecifically binds BLyS SegID 1927.

RESULT 14
US-09-315-574-39
i Sequence 39, Application US/09315574
j Patent No. 6512097
GENERAL INFORMATION:
APPLICANT: Marks, James D.
APPLICANT: Schier, Robert
TITLE OF INVENTION: Tumor Antigens
NUMBER OF SEQUENCES: 141
CORRESPONDENCE ADDRESS:
ADDRESSEE: Majestic, Parsons, Siebert & Hsue P.C.
STREET: Four Embarcadero Center, Suite 1100
STREET: California
COUNTRY: USA
STAIL: All of Campacible
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compacible
OPERATING SYSTEM: PC-DoS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CLASSIFCATION DATA:
PRILICATION NUMBER: US/09/315,574
FILING DATE: 14-UUN-1995
FILING DATE: 14-UUN-1995
                                                                                                                                                                                                                   COMPUTER FRADABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OMPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn PC-Base #1.0, Version #1.30 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/025,769B
FILING DATE: 18-FEB-1998
PRIOR APPLICATION NUMBER: BP 95 11 3021.0
FILING DATE: 18-MG-1995
ATTORNEY/AGENT INFORMATION:
NAME: James F. Haley, Jr., Esq.
REGISTRATION NUMBER: WORPHO/5
FILING DATE: 1215,596-9000
TELECOMMUNICATION INFORMATION:
TELEPRAX: (212)596-9000
TELEPRAX: (212)596-9000
TELEPRAX: (212)596-9000
INPORMATION POR SEQ ID NO: 18:
SEQUENCE TRRACTERISTICS:
LENGTH: 112 amino acids
TYPE: amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 62; DB 3; Length 112;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-10-981-692-33

US-10-981-692-33

Sequence 33, Application US/10981692

Publication No. US2005016377A1

GENERAL INFORMATION:

APPLICANT: Rosen et al.

TITLE OF INVENTION: Antibodies that Specifically Bind to Neurokinin B

FILE REFERENCE: PFS90P1

CURRENT APPLICATION NUMBER: US/10/981,692

CURRENT FILING DATE: 2004-11-05

FRIOR FILING DATE: 2003-05-29

PRIOR FILING DATE: 2003-05-30

PRIOR FILING DATE: 2003-05-30

NUMBER: PEQ 1D NOS: 76

SOFTWARE: PatentIn version 3.1

SEQ ID NO 33

US-10-981-692-26
US-10-981-692-26
Sequence 26, Application US/10981692
Publication No. US20050163777A1
GENERAL INFORMATION:
APPLICANT: Rosen et al.
TITLE OF INVERTION: Antibodies that Specifically Bind to Neurokinin B
TILE REFERENCE: PFS-90P1
CURRENT APPLICATION NUMBER: US/10/981,692
CURRENT FILING DATE: 2004-11-05
PRIOR APPLICATION NUMBER: PCT/US03/16802
PRIOR APPLICATION NUMBER: 60/383,802
PRIOR FILING DATE: 2002-05-30
                                                                                                                                                                                                                                                                                                                                                                                      TITLE OF INVENTION:

TITLE OF INVENTION: Antibodies that Immunospecifically Bind to TRAIL

TITLE OF INVENTION: Receptors

Novel human anti-Factor IX/IXa antibodies against IX/IXa gamma-carboxyglutamic acid domains useful as anti-coagulant in thrombosis, stroke, and post myocardial infarction.

Claim 8; Fig 2; 84pp; English.

This sequence represents a complementarity determining region 2 (CDR2) of the light chain variable domain of a human anti-factor IX/IXa Gla domain antibody. Factor IXa is a vitamin K dependent plasma serine protease that participates in the blood coagulation pathways. The Gla domain of factor IXa and its zymogen factor IX contains important structural determinants for interaction with high affinity binding sites on vascular endothelial

```
The invention relates to a method of producing a hybrid antibody or hybrid antibody fragment by: (1) providing an initial antibody having epcificity for a traget; (1) determining the sequence of a variable region of the initial antibody; (11) selecting a first component of the region consisting of FR1, FR2, FR3 and FR4; (1v) comparing the sequence of the first component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from a target species; (v) selecting a sequence from an antibody in the database which demonstrates a high degree of homology to the first component; (vi) selecting a second component of the variable region which is different than the first component, the second component selected from the group consisting of FR1, FR2, FR3 and FR4; (vi) comparing the sequence of the second component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from the target species; (viii) selecting a sequence from the database which demonstrates a high degree of homology to the second component and which is from a different antibody than the selected antibody; and (ix) operatively linking the
                                                                                                                                                                                                                                                                                                                ö
the treatment or prophylaxis of thrombotic or coagulopathic diseases or the treatment or prophylaxis of thrombotic or coagulopathic diseases or disorders in a mammal for which inhibiting a FIX/IX mediated event is indicated, e.g. deep venous thrombosis, arterial thrombosis, unstable angina, post myocardial infarction, post surgical thrombosis, coronary artery bypass graft (CABG), percutaneous transluminal coronary artery bypass graft (throw the transluminal coronary inflammation, septic shock, hypotension, adult respiratory distress syndrome (ARDS), arterial fibrillation and disseminated intravascular coagulopathy (DIC)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Producing a hybrid antibody or hybrid antibody fragment by operatively linking the selected framework sequences to one or more complementarity determining regions of the initial antibody.

ANU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain,
and heavy chain complementarity determining regions (CDR) of the
invention. The antibodies can be used in the treatment of obesity and
obesity related diseases. The antibodies can be used to deliver drugs or
pro-drugs directly to the far mass of an obese patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
adipocytes can be used to activate the immune system to destroy the cells
of complement mediated lysis. The antibodies may be labeled with a
detectable label such as radiolabel, fluorescent or chemical group and
used in methods of diagnosis in human subjects e.g. to determine the
presence of adipocyte antigen on the surface of an adipocyte sample.
The antibodies can be used as an alternative means of treatment for obese
the antibodies can be used as an alternative means of treatment for obese
                                                                                                                                                                                                                                                                                                             ö
selected framework sequences to one or more complementarity determining regions (CDRs) of the initial antibody to produce a hybrid antibody or hybrid antibody fragment. The method is useful for producing a hybrid antibody or hybrid antibody fragment (claimed). The antibody and fragments are useful for therapeutic and diagnostic purposes. The method uses entire framework regions from a single antibody variable heavy or variable light chain to receive the CDRs. This produces antibodies that are highly homologous and exhibit reduced immunogenicity while maintaining an optimum binding profile. This sequence represents the amino acid sequence of an antibody from the Vlambda gene locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Making antibodies (e.g. anti-decay accelerating factor antibody) for diagnosing or treating e.g. lung cancer comprises identifying an antigen that is differentially expressed on the surface of two or more distinct cell populations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of the light chain variable region (VL) of the anti-decay accelerating factor (DAF) human antibody LU30. The VH region is given in AAY06063. LU30 has a binding affinity (Kd) for DAF of about 13 nM. It was produced using a novel method for making antibodies which can be used for cancer diagnosis or therapy. The method comprises:
                                                                Gaps
for different types of fat deposits can also be produced e.g. intra-
abdominal fat associated with heart disease
                                                                                                                                                                                                                       LU30; human; antibody; VL domain; decay accelerating factor; DAF; chage display; subtractive panning; lung cancer; lung carcinoma; lung adenocarcinoma; therapy; diagnosis.

ö
(a) binding an antibody phage from a naive antibody phage library to a live cancer cell; (b) selecting an antibody phage or antibody which binds selectively to the live cancer cell; and (c) identifying an antibody which the antibody phage or antibody binds. To obtain LU30, a human scrvulbrary was used to search for tumour-associated antigens by panning the lung adenocarcinoma cell line 1264, and counter-selecting with a non-tumour bronchial epithelial cell line 188A-2B. The invention also describes a method for identifying an antigen which is differentially expressed on the surface of 2 or more distinct cell populations. The anti-DAF human antibody, or a composition comprising the antibody, is useful for in vivo cancer diagnosis or therapy. In particular, the antibody is useful lor diagnosing or treating lung cancer, e.g. small cell lung cancer, non-small cell lung cancer, large cell lung carcinoma, lung adenocarcinoma, or squamous cell lung carcinoma (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and obesity related disease. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid

and heavy chain complementarity determining regions (CDR) of the and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic Itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and cetectable label such as radiolabel, fluorescent or chemical group and cetectable label such as radiolabel, fluorescent or chemical group and cetectable label such as radiolabel, fluorescent or chemical group and cetectable label such as radiolabel, fluorescent or chemical group and cetermine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease
presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intraabdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related diseases.

and heavy chain complementarity determining regions (CDR) of the and heavy chain. Take and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies binding specifically to adipocyte and an antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

```
This polypeptide sequence comprises the light chain variable region (VL) of human carcinoembryonic antigen (hCEA) specific antibodies CEA1, CEA2 and CEAA. WH (AAT72123-35) gene sequences were obtained for anti-hCEA antibodies CEA1-CEA7 (see AAM19876-85). A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 -8 M, is non-cross-reactive with human liver cells, and preferentially binds to the A1-B3 extracellular domain of hCEA and/or to cell-associated hCEA over hCEA over soluble hCEA. Preferred (A) include pairings of VH and VL sequences from CEA1-7, or their CDR sequences, as well as CEA6 VH and VL variants. (A) is used to detect cells expressing hCEA, in vivo or in vitro, especially tumour cells for diagnosing cancer, e.g. adenocarcinoma of the colon, lung or breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Specific binding members for human carcinoembryonic antigen - bind to the A3-B3 extracellular domain of hCEA and are substantially non-cross-reactive with human liver cells; used for diagnosing cancer.
                                                                                      Carcinoembryonic antigen; CEA; human; antibody; scFv; tumour marker; lung cancer; breast cancer; colon cancer; adenocarcinoma; diagnosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAV02501-AAV02635, and AAV02641-AAV02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain. light chain,
and heavy chain complementarity determining regions (CDR) of the
invention. The antibodies can be used in the treatment of obesity and
conserved as a conserved of the far mass of an obese patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
adipocytes can be used to activate the immune system to destroy the cells
by complement mediated lysis. The antibodies binding specifically to
adipocytes can be used to activate the immune system to destroy the cells
by complement mediated lysis. The antibodies binding specifically to
can be used as a therapeutic itself. Antibodies binding specifically to
detectable label such as radiolabel, fluorescent or chemical group and
cused in methods of diagnosis in human subjects e.g. to determine the
consequence of adipocyte antigen on the surface of an adipocyte to detect or
determine the presence or level of adipocytes in a cell or tissue sample.
The antibodies can be used as an alternative means of treatment for obese
consequence of adipocyte of fat deposits can also be produced e.g. intra-
abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related

```
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the invertion. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody and be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or changel and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                      Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CRS) of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies batient or the antibody adjocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence or level of adipocytes in a cell or tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intraabdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                      AAU02501-AAV02635, and AAU02641-AAU02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain,
and heavy chain complementarity determining regions (CDR) of the
invention. The antibodies can be used in the treatment of obseity and
chugs directly to the fat mass of an obses patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
an be used as a therapeutic itself. Antibodies binding specifically to
adipocytes can be used to activate the immune system to destroy the cells
by complement mediated lysis. The antibodies may be labeled with a
detectable label such as radiolabel, fluorescent or chemical group and
used in methods of diagnosis in human subjects e.g. to determine the
presence of adipocytes antigen on the surface of an adipocyte to detect or
determine the presence or level of adipocytes in a cell or tissue sample.
The antibodies can be used as an alternative means of treatment for obese
for different types of fat deposits can also be produced e.g. intra-
abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          anti-HIV; cytostatic; virucide; single chain antibody; antibody; yeast;

The invention relates to a method of selecting a single chain antibody (scFv) against a peptide target in a yeast by expressing a library of scFv) against a peptide target in a yeast by expressing a library of scFv fusion proteins in yeast cells expressing the scFv fusion proteins brotein protein.

In the yeast cells expressing the scFv fusion proteins baving either the DNA binding domain or the activation domain of the transcription cartivator which is not comprised in the scFv fusion proteins, and a ctrarget peptide, and selecting those yeast cells in which a reporter gene is expressed. Each scFv fusion protein comprises either an activation domain or a DNA binding domain of a transcription activator and a scFv having a heavy chain of a variable region (WI) of antibody whose sequence varies within the library, a light chain of a variable region (WI) of antibody whose sequence varies within the library independently of the Cr antibody whose sequence varies within the library independently of the Cr corned by binding of the scFv fusion protein to the target fusion creporter gene is activated by a reconstituted transcriptional activator formed by binding of the scFv fusion protein to the target fusion creporter. The methods and compositions of the protein. The methods and compositions of the proventing and/or treating HIV infection and cancer. This sequence corresponds to the VI region of an anti-human CXCR4 loop 6 antibody gene corresponds to the VI region of an anti-human cXCR4 loop 6 antibody gene corresponds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
Selecting an scFv against a peptide target by expressing a target fusion procein having a DNA binding domain or activation domain of a transcription activator, useful for diagnosing, preventing and/or treating HIV infection and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HIV infection; HIV type 1; HIV type 2; cancer; breast; prostate; liver; renal; lung; skin; ovarian; cervical; brain; thyroid; stomach; colon; lymphoma; leukaemia; pancreas; chemokine receptor; antibody.

                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                  ö
                                                                                                      The invention relates to an antibody that binds to loop 6 of human chemokine receptor (CKCR4). The antibody is useful in the treatment or prevention of HIV infection (e.g. HIV type 1 and HIV type 2) and cancer of (e.g. breast, prostate, liver, renal, lung, skin, ovarian, cervical, brain, thyroid, stomach, colon, lymphoma, leukaemia and pancreas cancer cells), for screening furgs, for diagnosing disease or condition associated with interaction with chemokine receptor. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. EMBO J. 12, 725-734, 1993
A; Title: Human anti-self antibodies with high specificity from phage display libraries.
A; Reference number: S36286, MUID:93178448; PMID:7679990
A; Accession: S36281
A; Status: preliminary; nucleic acid sequence not shown
A; Molecule type: mRNA
A; Residues: 1-111 -GRIS
A; Cross references: EMBL:218823; NID:g33414; PIDN:CAA79275.1; PID:g939907
C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer; immunoglobulin
F;15-92/Domain: immunoglobulin homology <INM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
